

Calling All Students!

Join us for the

Google Summer of Code

What is Google Summer of Code?

- Google Summer of Code provides you with real-world experience in open source software development.
- During your 3-month summer break, you are paired with a participating open source organization to work on a programming project.

Since its inception in 2005, the program has brought together almost 11,000 student participants and 10,000 mentors from over 113 countries worldwide. Google Summer of Code has produced over 50 million lines of code for 515 open source organizations.

Why Choose to Intern with FreeBSD?

- Founded in 1993, FreeBSD consists of several hundred “committers” and tens of thousands of contributors.
- FreeBSD is used within many commercial products, including Apple’s Mac OS X, Netflix, and Sony PS4.
- You’ll have the opportunity to develop software ideas in an exciting environment with many real world applications, and under the mentorship of experienced developers.
- You may be sponsored by Google or the FreeBSD Foundation to attend operating systems and open source conferences to present your work.
- Google Summer of Code provides a great job networking opportunity!

Find out more at: <https://www.freebsd.org/projects/summerofcode.html>

Take advantage of this excellent opportunity to participate in real-world programming in a welcoming community.

Applications open in March 2017.
